

As of 3/31/2025

### Investment Objective

The objective of the portfolio is earning a continuous income by investing mainly in bond funds. The admixture of equity ETFs aims in increasing the yield.

### Investment Concept

The portfolio is composed of a bond ETF denominated in USD (approximately 60%) and equity ETFs (approximately 40%). The weightings of the equity ETFs within the portfolio follow the idea of roughly reflecting the share of the individual regional markets in the global equity market at the time of issue. These weightings are restored in a quarterly rebalancing. There is no discretionary management done for this portfolio. It should be noted that the portfolio's objective is not sustainable investment and the underlying investments in this portfolio have no binding obligation to take account of EU criteria for environmentally sustainable economic activities as set out in Regulation (EU) 2019/2088 and in Regulation (EU) 2020/852. The portfolio does not have a dedicated ESG strategy.

### Investment Horizon

The portfolio is primarily targeted at moderate investors who have an investment horizon of at least five years.

### Risk Profile

The portfolio aims a manageable risk. In addition to the typical risk associated with the ETFs held in the portfolio (such as credit risks, interest rate risks, equity risks), this portfolio has an exchange rate risk due to the different reference currencies of the funds as well as the diversification of assets of the funds contained within the portfolio.

### Portfolio Details
