Annual Report Net Expense Ratio	0.90
Management Fee	0.60
Max Front Load	5.00
Redemption Fee	0.00
Minimum Investment (Base Currency)	50

### Available Shareclasses

Retail Shareclasses	B, R
Clean Shareclasses	C

### Portfolio Structure

Portfolio Date: 31/03/2026

### Investment Strategy

The investment objective is to generate higher and long-term capital growth. Investments are made primarily in equity funds denominated in euro and other currencies (approximately 50% of the assets) and in bond funds (approximately 50% of the assets). The investments are diversified worldwide. The portfolio is primarily aimed at growth-oriented investors who should have an investment horizon of at least five years. The portfolio has a higher risk compared to a portfolio consisting mainly of bond funds. In addition to the typical risks of the funds contained in the portfolio (such as creditworthiness risks, price risks, interest rate risks), this portfolio also has an exchange rate risk due to the different reference currencies of the funds contained in the portfolio and due to the diversification of the assets of these funds.

### Manager Comment

Financial markets in March were largely shaped by the geopolitical escalation in the Middle East. In particular, the ongoing tensions surrounding the Strait of Hormuz and repeated attacks on energy infrastructure caused significant disruptions in energy markets and dominated global market sentiment. Oil prices showed pronounced volatility and traded at times well above the USD 100 per barrel mark during the month. Gas prices also posted sharp interim increases. The associated supply-side risks reignited global inflation concerns and led to a meaningful repricing of interest rate expectations. Against this backdrop, both equity and bond markets came under pressure. Higher energy prices weighed particularly on import-dependent economies in Europe and Asia, while the US economy proved comparatively more resilient. At the same time, government bond yields moved higher on the back of rising inflation expectations, adding further pressure to equity valuations. Monetary policy also moved back into focus. Both the Federal Reserve and the European Central Bank maintained a cautious tone in light of elevated inflationary pressure. Rate cuts appear less likely in the near term, while economic risks are rising at the same time. Overall, the picture of an increasingly stagflationary environment became more pronounced. The developments in March once again highlighted the importance of geopolitical risks for financial markets. Against this backdrop, a balanced and broadly diversified portfolio allocation remains an important factor in mitigating the effects of heightened uncertainty and volatility.
